DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Stephan A. Pendorf (Reg. #32,665) on August 26, 2010.

The application has been amended as follows:

IN THE CLAIMS

Claim 6 has been amended to read as follows:

6. (currently amended) A turbo-machine (1), including:
- a stator (2), internally coated with a running-in layer (6), the stator having a surface (3) dimensioned for close passage of a rotor, this surface (3) having an axis of symmetry and coated with said running-in layer,
 - a rotor (4) configured for rotation within the stator (2), the rotor having an axis of rotation and having rotor blades (5) configured for close passage to said stator surface (3), and
 - a device on which the rotor is mounted for radial displacement and rotation of the rotation axis of the rotor (10) about the axis of symmetry of the stator (2), resulting in the rotation axis of the rotor orbiting about the axis of symmetry of the stator (2) for at least partially wearing away or abrading said running-in layer.

Art Unit: 3745

~~produced by a process comprising:~~
~~attaching said stator to said device on which said rotor is mounted, such that said rotor~~
~~blades are in proximity to or in contact with said stator surface (3) adjacent the rotor,~~
~~and~~
~~— rotating said rotor about the rotation axis of the rotor, while simultaneously~~
~~rotating the rotation axis of the rotor (10), radially displaced from the axis of symmetry of~~
~~the stator (2), to orbit about the axis of symmetry of the stator(2).~~

The above changes have been made to claim 6 in order to add the limitations of the running-in layer coating the surface of the stator and to more accurately describe the orbital motion of the rotor and the wearing away or abrading of the running-in layer. It is these limitations that allow claim 6 to overcome the prior art.
